
Computer Science 571 2nd Exam
Prof. Papa
Tuesday, December 3, 2013, 5:30pm – 6:40pm

Name:

Student ID Number:

1. This is a closed book exam.
2. Please answer all questions on the test

JavaScript/JSONP Questions [20 pts]

Consider the following `<script>` tag which includes a `src` attribute referring to a Google spreadsheet (using Google Drive):

```
<script
src="http://spreadsheets.google.com/feeds/list/o03712292828507838454.2635427
448373779250/od6/public/basic?alt=json-in-script&callback=listTasks">
</script>
```

Google Drive (aka Docs) will return the following JSONP:

```
listTasks({"version": "1.0", "encoding": "UTF-8",
"feed": {"xmlns": "http://www.w3.org/2005/Atom",
"xmlns$openSearch": "http://a9.com/-/spec/opensearchrss/1.0/",
"xmlns$gsx": "http://schemas.google.com/spreadsheets/2006/extended",
"id": {"$t": "https://spreadsheets.google.com/feeds/list/o03712292828507838454.2635427448373779250/od6/public/basic"},
"updated": {"$t": "2006-12-05T10:35:42.800Z"}, "category": [{"scheme": "http://schemas.google.com/spreadsh
eets/2006",
"term": "http://schemas.google.com/spreadsheets/2006#list"}], "title": {"type":
"text", "$t": "Sheet1"},
"link": [{"rel": "alternate", "type": "text/html",
"href": "https://spreadsheets.google.com/pub?key\u003do03712292828507838454.2635427448373779250"},
{"rel": "http://schemas.google.com/g/2005#feed", "type": "application/atom+xml",
"href": "https://spreadsheets.google.com/feeds/list/o03712292828507838454.2635427448373779250/od6/public/basic"},
{"rel": "self", "type": "application/atom+xml",

"updated": {"$t": "2006-12-05T10:35:42.800Z"}, "category": [{"scheme": "http://schemas.google.com/spreadsh
eets/2006",
```

```

"term": "http://schemas.google.com/spreadsheets/2006#list"]], "title": {"type":
"text",
"$t": "My super great JSONP example"}, "content": {"type": "text", "$t": "status:
Done"},
"link": [{"rel": "self", "type": "application/atom+xml",
"href": "https://spreadsheets.google.com/feeds/list/o03712292828507838454.263
5427448373779250/od6/public/basic/cokwr"}]],
{"id": {"$t": "https://spreadsheets.google.com/feeds/list/o0371229282850783845
4.2635427448373779250/od6/public/basic/cpzh4"},
"updated": {"$t": "2006-12-
05T10:35:42.800Z"}, "category": [{"scheme": "http://schemas.google.com/spreadsh
eets/2006",
"term": "http://schemas.google.com/spreadsheets/2006#list"]], "title": {"type":
"text", "$t": "Do JSON project for class"},
"content": {"type": "text", "$t": "status:
NotStarted"}, "link": [{"rel": "self", "type": "application/atom+xml",
"href": "https://spreadsheets.google.com/feeds/list/o03712292828507838454.263
5427448373779250/od6/public/basic/cpzh4"}]]]]];

```

In your JavaScript, you have the following code:

```

function listTasks(root) {
var feed = root.feed;
var html = [''];
html.push('<ul>');
for (var i = 0; i < feed.entry.length; ++i) {
var entry = feed.entry[i];
var title = entry.title.$t;
var content = entry.content.$t;
html.push('<li>', title, ' (', content, ') </li>');
var u = entry.updated.$t;
html.push('<li> ', u, ' </li>');
}
html.push('</ul>');
document.getElementById("agenda").innerHTML =
html.join("");
}

```

Q1: What is the “output” produced by such a function?

A1:

```

<ul>
  <li> My super great JSONP example (status: Done) </li>
  <li> 2006-12-05T10:35:42.800Z </li>
  <li> Do JSON project for class (status: NotStarted) </li>
  <li> 2006-12-05T10:35:42.800Z </li>
</ul>

```

Web Security Questions [10 pts]

Each question is worth 2 points.

Q1: What are common ways that websites get infected?

A1:

- ☒ SQL Injection attacks
- ☐ XSP Scripting attacks
- ☒ Search Engine result redirection
- ☒ Using social networking sites to infect users
- ☒ Attacks on back end virtual hosting companies
- ☐ ALL OF THE ABOVE

Q2: Give one example of “weak” password recovery validation

A2:

Any one of these:

1) Information Verification: Asking the user to supply their email address along with their phone number. Note that these are both publicly available.

2) Password Hints: Many users have a tendency to embed the password in the hint itself.

3) Secret Question + Answer: Something like “In which city were you born?” for a password recovery system is easily circumventable today because most of the information is public due to social networking sites.

Q3: What is a JSON array vulnerable to?

A3: JavaScript Hijacking

Q4: Name one technique used to bypass the same-origin policy.

A4:

Any one of these:

1) JSON and the Dynamic Script Tag –OR- JSONP

2) AJAX Proxy

3) Browser Extension and plugin

Q5: What used to be the problem of Domain Keys Identified Mail (DKIM) as implemented by Google Mail?

A5: DKIM keys were too short and could be factored in 24 hours using a notebook.

HTML5 Questions [10 pts]

Each question is worth 2 points.

Q1: In a <canvas> element what is the purpose of the “id” attribute?

A1: **to obtain the “drawing context” using getContext()**

Q2: Which of the following are new elements in HTML5?

☒ article

☒ aside

☐ applet

☒ header

☐ column

☒ nav

☐ ALL OF THE ABOVE

Q3: Which of the following are removed elements in HTML5?

A3:

☒ center

☒ font

☐ footer

☒ applet

☐ time

☒ frameset

☐ ALL OF THE ABOVE

Q4: Name three new elements requested by newspaper publishers?

A4: **header, footer, nav, article, section, aside.**

Q5: What is the required attribute of the <video> element in HTML5, when the video is in a single format?

A5: **src**

Web Performance Questions [10 pts]

Each question is worth 2 points.

Q1: What Rule is this code an example of?

```
uF(this.L,this.Q,new G(b[a].x,b[a].y));var  
c,d,e,f=$L(this,a),g=aM(this,a);e=b=c=d=0;
```

A1: Minification of JavaScript

Q2: Why are CSS Expressions to be avoided?

A2: Because they may execute many times, on mouse clicks, keyboard presses, etc.

Q3: Why using a large number of hostnames in a web page is not good for performance?

A3: Because each hostname may involve a time consuming DNS lookup

Q4: When is the use of ETags not recommended?

A4: When using “farms” of UNIX servers.

Q5: What is the interaction between favicon.ico and cookies and how do you optimize it?

A5: Each time the browser request this file, the root cookies are sent, so they should be small

XML Schema Question [10 pts]

Below is a sample DTD for a song, song.dtd.

```
<!ELEMENT SONG (TITLE, COMPOSER+, PRODUCER*, PUBLISHER*,  
LENGTH?, YEAR?, ARTIST+)>  
<!ELEMENT TITLE (#PCDATA)>  
<!ELEMENT COMPOSER (#PCDATA)>  
<!ELEMENT PRODUCER (#PCDATA)>  
<!ELEMENT PUBLISHER (#PCDATA)>  
<!ELEMENT LENGTH (#PCDATA)>  
<!ELEMENT YEAR (#PCDATA)>  
<!ELEMENT ARTIST (#PCDATA)>
```

Translate this DTD into the corresponding Schema, song.xsd, adding the following restrictions:

1. LENGTH should be a restricted type of the form “hh:mm:ss” with hh, mm and ss are each a sequence of two digits, with a colon in between, as in 12:05:00;
2. YEAR should be of type “Gregorian Calendar Year”

Here is a portion of song.xsd, to get you started:

```
<?xml version="1.0" encoding="UTF-8"?>  
<xsd:schema xmlns:xsd="http://www.w3.org/2001/XMLSchema"  
elementFormDefault="qualified">  
  <xsd:simpleType name="TimeType">  
    <xsd:restriction base="xsd:string">  
      <xsd:pattern value="\d{2}:\d{2}:\d{2}"/>  
    </xsd:restriction>
```

ADD CODE HERE (3 pts)

```

</xsd:simpleType>

<xsd:element name="SONG">
  <xsd:complexType>
    <xsd:sequence>
      <xsd:element ref="TITLE"/>
      <xsd:element maxOccurs="unbounded" ref="COMPOSER"/>
      <xsd:element minOccurs="0" maxOccurs="unbounded" ref="PRODUCER"/>
      <xsd:element minOccurs="0" maxOccurs="unbounded" ref="PUBLISHER"/>
      ADD CODE HERE (5 pts)
      <xsd:element minOccurs="0" ref="LENGTH"/>
      <xsd:element minOccurs="0" ref="YEAR"/>

      <xsd:element maxOccurs="unbounded" ref="ARTIST"/>
    </xsd:sequence>
  </xsd:complexType>
</xsd:element>

<xsd:element name="TITLE" type="xsd:string"/>
<xsd:element name="COMPOSER" type="xsd:string"/>
<xsd:element name="PRODUCER" type="xsd:string"/>
<xsd:element name="PUBLISHER" type="xsd:string"/>
COMPLETE NEXT 2 LINES (2 pts)
<xsd:element name="LENGTH" type="TimeType" />
<xsd:element name="YEAR" type="xsd:gYear" />
<xsd:element name="ARTIST" type="xsd:string"/>
</xsd:schema>

```

JSON Questions [10 pts]

All questions are worth 2 points

Q1: What is the MIME type for JSON?

A1: application/json

Q2: Consider the following script:

```

<script type="text/javascript">
eval("x=10;y=20;document.write(x*y)");
document.write("<br />");
document.write(eval("2+2"));
document.write("<br />");
var x=10;
document.write(eval(x+17));
document.write("<br />"); </script>

```

What is the output that gets produced?

A2:

200

4

27

Q3: What is a JSON “object”?

A3: **A collection of key:value pairs, comma-separated and enclosed in curly brackets**

Q4: When should you use arrays when modeling your data?

A4: **When key names are sequential integers.**

Q5: What is the following code?

```
// Constructor -- pass a REST request URL to the constructor
function JSONscriptRequest(fullUrl) {
// REST request path
this.fullUrl = fullUrl;
// Keep IE from caching requests
this.noCacheIE = '&noCacheIE=' + (new Date()).getTime();
// Get the DOM location to put the script tag
this.headLoc = document.getElementsByTagName("head").item(0);
// Generate a unique script tag id
this.scriptId = 'JscriptId' +
JSONscriptRequest.scriptCounter++; }
// Static script ID counter
JSONscriptRequest.scriptCounter = 1;
// buildScriptTag method
JSONscriptRequest.prototype.buildScriptTag = function () {
// Create the script tag
this.scriptObj = document.createElement("script");
// Add script object attributes
this.scriptObj.setAttribute("type", "text/javascript");
this.scriptObj.setAttribute("charset", "utf-8");
this.scriptObj.setAttribute("src", this.fullUrl +
this.noCacheIE);
this.scriptObj.setAttribute("id", this.scriptId); }
// removeScriptTag method
JSONscriptRequest.prototype.removeScriptTag = function () {
// Destroy the script tag
this.headLoc.removeChild(this.scriptObj); }
// addScriptTag method
JSONscriptRequest.prototype.addScriptTag = function () {
// Create the script tag
this.headLoc.appendChild(this.scriptObj); }
```

A5: Source code for the Dynamic Script Tag “Hack.”

AJAX Questions [10 pts]

All questions are worth 2 points

Q1: Of the URLs below, which have the same origin?

- a. `http://www.ajaxbook.com`
- b. `http://www.ajaxbook.com:8443`
- c. `https://www.ajaxbook.com`
- d. `http://ajaxbook.com`
- e. `http://www.ajaxbook.com:80`

A1: a and e -OR- “none”

Q2: Which of the following are common characteristics of AJAX applications?

A2:

- ☒ They allow for smooth, continuous interaction
- ☒ May provide "Live" content
- ☒ May have visual effects
- ☒ May include animations and dynamic icons
- ☐ May include Google Map widgets
- ☒ May include custom selectors and buttons
- ☒ May use drag-and-drop
- ☒ May implement double-click
- ☐ ALL OF THE ABOVE

Q3: What is returned by `getResponseHeaders()` method of the `XMLHttpRequest()` object?

A3: A “string” containing a complete set of HTTP response headers

Q4: What are two sample values of the “status” property of the `XMLHttpRequest()` object

A4: 400 and 200

Q5: What is a common way to work around the cross-domain restriction of `XMLHttpRequest()`?

A5: Use a proxy

Cookies and Privacy Questions [10 pts]

Q1: Complete the PHP code to set a cookie with name “username2” and value “Barney rubble”, and expiring in an hour:

```
<?php
setcookie("username2", "Barney rubble", time()+3600);
?>
<a href="viewcookie.php">Click here to view the cookie</a><br/><br/>
```

Q2: Complete the PHP code to view the value of a cookie named “username2”. Ensure that the cookie exists.

```
<?php
if( isset($_COOKIE["username2"]) ) {
    echo "The new cookie <b>username2</b> contains the value " .
$_COOKIE["username2"];
}
```

JQuery Questions [10 pts]

Q1: What is the JQuery code that corresponds to the following?

```
var myButton = document.getElementById("myButton");
```

A1: `$("#myButton");`

Q2: What are three of JQuery “basic” selectors?

A2: Any 3 of All, Class, Element, ID and Multiple.

Q3: [This question is worth 6 points] Consider the following example without JQuery:

```
hex=255 // Initial color value.
function fadetxt() {
    if(hex>0) { //If color is not black yet
        hex -= 11; // increase color darkness

document.getElementById("sample").style.color="rgb("+hex+", "+hex+", "+hex+)"
;
        setTimeout("fadetxt()",20);    }
    else    hex=255 //reset hex value
}

```

A3: Rewrite it using JQuery.

```
$(function() { // when document is ready
    $("#fadeText").click(function() { // set a onClick handler on fadeText
        $("h3").fadeOut(125).delay().fadeIn(125);
        // fadeOut the h3 for 125 ms, delay, then fadeIn
    });
});
```
